Electronics Communication And Information Engineering

# Microcontroller

- It is specially designed circuits for embedded applications and is widely used in automatically controlled electronic devices. It contains memory, processor, and programmable I/O.
- It's types:
  - Intel MCS-51
  - 8051 microcontroller
  - AVR microcontroller
  - PIC microcontroller

# Arduino

---

- The Arduino board is a small microcontroller board, which is a small circuit that contains a whole computer on a small chip (the microcontroller).
- Arduino is composed of two major parts:
  - Arduino board
  - the IDE
- IDE uses simplified version of C and C++ programming language.

# Arduino Specification

---

- Microcontroller: ATmega 328P
- Operating Voltage: 5V
- Input Voltage: 7-12 V
- Digital I/O Pins: 14 pins (including 6 PWM Pins)
- Analog input Pins: 6
- DC Current / pin : 40mA
- DC Current whole Pins: 200mA
- Flash memory: 32 KB
- SRAM: 2KB
- EEPROM: 1 KB
- Clock Speed: 16 MHz

# Major Components of Arduino

- USB Connector
- Power Port
- Microcontroller (ATmega 328P)
- Analog Input Pins (A0-A5)
- Digital Input Pins (0-13)
- Reset Switch
- Crystal Oscillator (16 MHz)
- USB Chip Interface
- RX TX LED's

## Arduino UNO

# Arduino - Program Structure

- Arduino programs can be divided in three main parts:
  - Structure
    - Setup() function
    - Loop() function
  - Values (variables and constants)
  - Functions.

# Introduction to H - Bridge

# Applications of H-Bridge Circuit

- The most important application of the H-Bridge circuit as the motor driver circuit.
- In Robotics Technology, H-bridge circuits are used.

# Motor Driver (L298N)

# Relay

- Electro-Mechanical Switch
- works on the principle of  
electromagnetic induction
